## Tunmore Triangle

recreation. A strip of the Triangle provides a pleasant grassed parking facility for visitors.  Features  o Approximately one acred sized area of cut grass featuring a large variety of young and mature trees o Spring bulbs are planted throughout o A wood pile beneath mature trees o A mixed hedge that is being bulked up with new planting o An old well that has been renovated and secured o A communal green waste heap  Habitats  Species Priority  Current Management O The grass and hedge are regularly cut through the year. The communal green waste heap is regularly burnt off and the mature trees are damaged from the fires  Management Guidance  As suggested for the Recreation Ground, the communal 'bonfire' could so easily be a benficial communal composting facility with plenty of space for 3 heaps of (1) Leaves for leafmould (2) Woody cuttings and (3) Other soft green waste. By not being burnt, the decomposing vegetation will enrich and renew local biodiversity and offer a beneficial resource for gardeners.  It was noted that non-green waste was included on this waste heap - formica covered kitchen tops which generate appalling toxic furnes if burned. Under the Waste Mangement (England & Wales) Regulations 2006 it is an offence for people to dispose of their domestic waste in a way likely to cause pollution of the environment or harm to human health.  3 Consider adding some low indigenous shrubs to the post and rail fence line, preferably a species that has berries or nuts	Location		The South west corner of Tunmore fields across the lane from The Old Post House
